

HEALTHCARE ANALYTICS

for Doctor Visits

Student-Friendly Dataset Understanding Guide

Dataset Records	5,190
Dataset Columns	13
Main Focus	Understanding patterns related to doctor visits

Purpose: Help students understand the dataset before beginning data analysis.

1. Dataset Overview

What is this dataset about? This dataset contains information about people, their health conditions, healthcare support, and the number of times they visited a doctor. The purpose is to explore patterns and understand which factors may be associated with doctor visits.

Simple classroom question: Why do some people visit a doctor more often than others?

2. Main Objective

The main objective is to analyze patient-related information and identify useful patterns in doctor visits. Students can compare age, health condition, illness, income, chronic conditions, and healthcare support with the number of visits.

3. Column Definitions

The following table explains every column in simple language. Students do not need to memorize the terms; they should understand what information each column represents.

Column	Simple Definition	Category	Example / Meaning
visits	Number of times the person visited a doctor during the period covered by the dataset.	Doctor visits	0, 1, 2, 5...
gender	Gender of the person, such as male or female.	Personal information	male / female
age	Age of the person. The dataset stores age in a numerical/decimal format.	Personal information	Age value
income	Income level of the person or household, representing financial background.	Financial information	Income level
illness	Number of illnesses or health problems reported by the person.	Health information	0, 1, 2... illnesses
reduced	Number of days the person's normal activities were reduced or affected because of health problems.	Health impact	Days affected
health	A numerical indicator representing the person's general health condition.	Health information	Health-status value
private	Shows whether the person has private healthcare or private health insurance coverage.	Healthcare support	yes / no
freepoor	Shows whether the person receives free healthcare support based on financial need.	Healthcare support	yes / no
freerepat	Shows whether the person receives healthcare through a special repatriation-related healthcare support program.	Healthcare support	yes / no
nchronic	Shows whether the person has a chronic health condition.	Chronic condition	yes / no
lchronic	Shows whether the person has a long-term chronic health condition.	Chronic condition	yes / no
Unnamed: 0	A row or record identifier. It is mainly used to identify entries and is not a healthcare measurement.	Record identifier	Record number

4. Grouping the Columns

Category	Columns
Personal Information	gender, age
Financial Information	income
Health Information	illness, health, reduced, nchronic, lchronic
Healthcare Support	private, freepoor, freerepat
Doctor Visit Information	visits
Record Identification	Unnamed: 0

5. Simple Meaning of Healthcare Analytics

Healthcare analytics means studying healthcare-related data to find useful patterns and support better understanding and decision-making.8. Key Learning Outcome9.
